US-09-513-999C-28108
i Sequence 28108, Application US/09513999C
j Patent No. 6783961
j GENERAL INFORMATION:
i APPLICANT: Dunas Milne Edwards, J.B.
i APPLICANT: Glordano, J.Y.
i TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
j Patent No. 6783961
j FILE REPERENCE: 59.9US2.REG
cURRENT FILING DATE: 2000-02-24
j PRIOR PELICATION NUMBER: US 60/122,487
j RIOR FILING DATE: 1999-02-26
j NUMBER OF SEQ ID NOS: 36681
j SOFTWARE: Patent.pm
j SEQ ID NO 28108
j LENGTH: 79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

TITLE OF INVENTION: Biallelic markers for use in constructing a high density...
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 26492, Application US/09513999C
| Patent No. 6783961
| GENERAL INPORMATION:
| APPLICANT: Dumas Milne Edwards, J.B.
| APPLICANT: Dumas Milne Edwards, J.B.
| APPLICANT: Duclert, A.
| TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
| PATENT REPERENCE: 59. US2.REG
| PATENT PAPLICATION NUMBER: US/09/513,999C
| CURRENT APPLICATION NUMBER: US 60/122,487
| PRIOR PAPLICATION NUMBER: US 60/122,487
| PRIOR FILING DATE: 1999-02-26
| NUMBER OF SEQ ID NOS: 36681
| SOFTWARE: Patent.pm
| SEQ ID NO 26492
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Patent No. 6670464

GENERAL INFORMATION:
APPLICANT: Shimkets, Richard A.
APPLICANT: Leach, Martin
TITLE OF INVENTION: Nucleic Acids Containing Single Nucleotide
TITLE OF INVENTION: 1904-9140, 1995
CURRENT APPLICATION NUMBER: 1090-11-16
PRIOR PLILING DATE: 1999-11-16
PRIOR FILING DATE: 1999-11-17
NUMBER OF SEQ ID NOS: 1272

US-09-513-999C-18997/C

Sequence 18997, Application US/09513999C

Patent No. 678361

APPLICANT: Duclert, A.

APPLICANT: Giordano, J.Y.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

PATENTE SPERENCE: 59.US2.REG

FILE REFERENCE: 59.US2.REG

CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT FILING DATE: 2000-02-24

PRIOR FILING DATE: 10999-02-26

NUMBER OF SEQ 1D NOS: 36681

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Gaps
              Sequence 294, Application US/09443199C

Patent No. 6670464

GENERAL INFORMATION:

APPLICANT: Shimkers, Richard A.

APPLICANT: Shimkers, Richard A.

TITLE OF INVENTION: Nucleic Acids Containing Single Nucleotide

TITLE OF INVENTION: Polymorphisms and Methods of Use Thereof

TILE REPREBUCE: 15966-534A

CURRENT APPLICATION NUMBER: US/09/443,199C

CURRENT APPLICATION NUMBER: 0999-11-16

PRIOR APPLICATION NUMBER: 60/109,024

PRIOR FILING DATE: 1998-11-17

NUMBER OF SEQ ID NOS: 1272

SOFTWARE: Curaden Patent Formatter Version 0.9

Patent No. 5948634
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: de la Monte, Suzanne
APPLICANT: de la Monte, Suzanne
APPLICANT: Wands, Jack R.
TITLE OF INVENTION: of Alzheimer's Disease
NUMBER OF SEQUENCES: 121
CORRESPONDENCE ADDRESS:
ADDRESSEE: Sterne, Kessler, Goldstein & Fox P.L.L.C.
STREET: 1100 New York Avenue, Suite 600
CITY: Washington
Patent No. 5830670
GENERAL INFORMATION:
APPLICANT: de la Monte, Suzanne
APPLICANT: de la Monte, Suzanne
APPLICANT: Wands, Jack R.
TITLE OF INVENTION: Neural Thread Protein Gene Expression and Detection
TITLE OF INVENTION: of Alzheimer's Disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-09-304-232-210/c

US-09-304-232-210/c

Sequence 210, Application US/09304232

Patent No. 65251805

GENERAL INFORMATION:

APPLICANT: Fan, Jian Bing

APPLICANT: Chakrawarti, Aravinda

APPLICANT: Affymetrix, Inc.

TITLE OF INVENTION: Polymorphisms Associated With

TITLE OF INVENTION: Hypertension

TITLE OF INVENTION: Hypertension

FILE REFERENCE: 018547-034210US

CURRENT APPLICANTON NUMBER: US/09/304,232

CURRENT APPLICATION NUMBER: US/09/404,232

CURRENT PILING DATE: 1999-05-03

EARLIER PILING DATE: 1998-05-07

NUMBER OF SEQ ID NOS: 909

SOUTHARD FALSE PASSEQ FOR Windows Version 3.0

LENGTH: 29
                                                                         GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 509, Application US/09304232
; Batent No. 6525185
; GENERAL INFORMATION:
; APPLICANT: Fan, Jian Bing
; APPLICANT: Case Western Kenneth
; APPLICANT: Case Western Keserve University School of Medicine
; APPLICANT: Affymetrix, Inc.
; TITLE OF INVENTION: Polymorphisms Associated With
; TITLE OF INVENTION: Pypertension
; TITLE OF INVENTION: Hypertension
; FILE REFERENCE: 018547-034210US
; CURRENT APPLICATION NUMBER: US 60/084,641
; EARLIER PELLING DATE: 1999-05-03
; NUMBER OF SEQ ID NOS: 909
; SOFTWARE FRENCE F
Sequence 181, Application US/09304232

Patent No. 6525185

GENERAL INFORMATION:
APPLICANT: Fan, Jian Bing
APPLICANT: Chakravarti, Aravinda
APPLICANT: Halushka, Marc Kenneth
APPLICANT: Alguentika, Marc Kenneth
APPLICANT: Affmetrix, Inc.
